

# Full Day Training Plan for Professional Go

Days	Modules	Highlight of the Topic
Day 1	Module 1, 2, 3	Core language fundamentals
Day 2	Module 4	User-defined type system, writing idiomatic Go code
Day 3	Module 5 ,6	concurrency programming
Day 4	Module 7, 8	Go modules, HTTP programming
Day 5	Module 9,10,	RESTful APIs Testing Go code
Day 6	Module 11, 12, 13	Mini project ,Generics , Package Context and structured logging
Day 7	Module 14,15	Advanced Goroutines & SQL/NoSQL Databases
Day 8	Module 16,17	Cli application & Behavior-Driven Development (BDD)
Day 9	Module 18,19	gRPC and Protocol Buffers , ORM
Day 10	Module 20,21,22,23	GORM, Microservices, Microservices and Cloud Native
Day 11	Module 24,25,26	Kafka , CockroachDB , NATS
Day 12	Module 27,28	SAAS project   docker kubernetes

## Course Outline:

Module No.	Module Name and Contents
1.	<b>Introduction to Go</b> <ul style="list-style-type: none"><li>• Introduction to Go programming language</li><li>• Setting up Go development environment</li></ul>
2.	<b>Go Language Fundamentals</b> <ul style="list-style-type: none"><li>• Core language fundamentals</li><li>• Functions</li><li>• Arrays, Slices and Maps</li><li>• Defer, Panic and Recover</li></ul>

	<ul style="list-style-type: none"> <li>• Error handling</li> </ul>
3.	<b>User-Defined Type System and Idiomatic Go</b> <ul style="list-style-type: none"> <li>• A deep dive into Go's type system</li> <li>• Introduction to Structs and Interfaces</li> </ul>
4.	<b>Idiomatic Go</b> <ul style="list-style-type: none"> <li>• Adding Behaviors to Structs</li> <li>• Value Receivers and Pointer Receivers</li> <li>• Using composition pattern for building data model for Go apps</li> <li>• Using interface and structs for writing idiomatic Go code with SOLID principles and Clean architecture</li> </ul> <b>Go Package Ecosystem</b> <ul style="list-style-type: none"> <li>• A deep dive into package ecosystem in Go</li> <li>• Writing packages</li> <li>• Go Tools</li> <li>• Using Go standard library packages</li> <li>• Using third-party packages</li> </ul>
5.	<b>Concurrency Programming</b> <ul style="list-style-type: none"> <li>• Concurrency in Go</li> <li>• Goroutines</li> <li>• Channels</li> <li>• Unbuffered Channels</li> <li>• Buffered Channels</li> <li>• Channel Select</li> <li>• Advanced Concurrency patterns</li> </ul>
6.	<b>Mutexes for preventing race conditions</b> <ul style="list-style-type: none"> <li>• Preventing data race conditions with Mutexes</li> </ul>
7.	<b>Go Modules</b> <ul style="list-style-type: none"> <li>• Dependency management in Go</li> <li>• Working with Go Modules</li> </ul>
8.	<b>HTTP Programming and RESTful APIs: From basics to building production ready backend APIs</b> <ul style="list-style-type: none"> <li>• A deep dive into Go's http package</li> <li>• ServeMux, Handler and HandlerFunc</li> <li>• Extending Go's http package by using third-party packages</li> <li>• Routing using Gorilla Mux/ go-chi</li> <li>• Writing HTTP middleware</li> <li>• Building real-world RESTful APIs</li> </ul> <ul style="list-style-type: none"> <li>• net/http basics, ServeMux, HandlerFunc, GET/POST endpoints</li> <li>• Hands-on Lab: Expose /users endpoints</li> </ul>

9.	<b>Introduction to Go Web Frameworks</b> <ul style="list-style-type: none"> <li>• The Go philosophy about Web frameworks Vs Libraries</li> <li>• Introduction to Echo/Gin web framework</li> </ul>
10.	<b>Testing Go Applications</b> <ul style="list-style-type: none"> <li>• Test-Driven Development (TDD)</li> <li>• Writing unit tests</li> <li>• Writing Benchmark tests</li> <li>• Testing HTTP applications</li> <li>• Mocking Go interfaces</li> <li>• Mocking with GoMock - A mock framework for Go</li> </ul>
11.	<b>Go Generics</b> <ul style="list-style-type: none"> <li>• Creating generic functions to handle multiple types</li> <li>• Creating type constraints</li> <li>• Working with generics</li> </ul>
12.	<b>Package Context</b> <ul style="list-style-type: none"> <li>• Creating Context type for carrying deadlines and cancellation signals •</li> <li>Creating Context type for sharing request-scoped values</li> </ul> <p>Hands-on Lab: Implement concurrent user processing with error propagation</p>
13.	<b>Structured logging with slog</b> <ul style="list-style-type: none"> <li>• Introduction to structured logging</li> <li>• Structured logging with slog (official logging package from Go 1.21.0) •</li> <li>Built-in handlers in slog</li> </ul> <p>Mini project : Hands-on Lab: Convert User Service to Gin framework</p>

Module No.	Module Name and Contents	Duration
14	<b>Advanced Concurrency Programming Patterns</b> <ul style="list-style-type: none"> <li>• Managing Goroutines with Package context</li> <li>•Buffered/unbuffered channels, select statement, synchronization</li> <li>• Mutexes and preventing race conditions</li> <li>• Propagating errors from Goroutines</li> <li>• Coordinating group of Goroutines and propagating errors with Package errgroup</li> <li>• Coordinating group of Goroutines and propagating errors with Package oklog/run</li> </ul>	5 Hour

15	<b>Working with SQL/NoSQL Databases</b> <ul style="list-style-type: none"> <li>• Working with SQL Databases</li> <li>• Working with NoSQL Databases, with MongoDB</li> </ul>	4 Hour
16.	<b>Behavior-Driven Development (BDD) with Ginkgo</b> <ul style="list-style-type: none"> <li>• Writing BDD-styled testing</li> <li>• A deep dive into Ginkgo v2, BDD test framework</li> <li>• Mocking Go interfaces</li> <li>• Mocking with GoMock - A mock framework for Go • Integrating GoMock with Ginkgo BDD test framework</li> </ul>	4 Hour
17.	<b>Building CLI applications</b> <ul style="list-style-type: none"> <li>• Building CLI applications with Cobra</li> <li>• Adding interactive prompts for CLI applications.</li> </ul>	4 Hour
18	<b>Building APIs using gRPC and Protocol Buffers</b> <ul style="list-style-type: none"> <li>• Introduction to gRPC</li> <li>• Introduction to Protocol Buffers</li> <li>• Building APIs with gRPC and Protocol Buffers</li> </ul>	5 Hour
19.	<b>Ent: An entity framework / ORM for Go</b> <ul style="list-style-type: none"> <li>• Introduction to ent</li> <li>• Schema and code generation</li> <li>• Entity fields</li> <li>• Entity edges</li> <li>• Creating Graphs</li> <li>• Querying data</li> <li>• Working with Ent</li> <li>• The Ent ecosystem: The big picture</li> </ul>	3 Hour
20.	<b>GORM: An ORM library for Go</b> <ul style="list-style-type: none"> <li>• Introduction to GORM</li> <li>• Working with GORM</li> </ul>	2 Hour

Module No.	Module Name and Contents
21.	<b>A Primer on Microservices and Cloud Native</b> <ul style="list-style-type: none"> <li>• Introduction to Cloud Native</li> <li>• Introduction to Microservices based distributed systems</li> </ul>
	<ul style="list-style-type: none"> <li>• Pros and Cons of Microservices</li> <li>• Practical challenges with Microservices</li> </ul>

22.	<b>Decomposition patterns for Microservices</b> <ul style="list-style-type: none"> <li>• Introduction to Domain-Driven Design (DDD)</li> <li>• Building blocks of Domain-Driven Design</li> <li>• Decomposing Microservices with Bounded Context pattern</li> <li>• Building Microservices with Domain-Driven Design Aggregate and Domain Events</li> </ul>
23.	<b>Building high performance APIs using gRPC and Protocol Buffers</b> <ul style="list-style-type: none"> <li>• Introduction to gRPC – A communication patterns for Microservices • Introduction to Protocol Buffers</li> <li>• Building APIs with gRPC and Protocol Buffers</li> <li>• Writing Streaming APIs</li> <li>• Error handling in gRPC</li> <li>• Writing Interceptors in gRPC</li> </ul>
24.	<b>Working with Kafka , CockroachDB – A distributed fault tolerant database (Used for demos)</b> <ul style="list-style-type: none"> <li>• Introduction to Kafka</li> <li>• Introduction to Kafka producer consumer</li> <li>• Introduction to CockroachDB</li> <li>• Running CockroachDB clusters</li> <li>• Working with CockroachDB</li> </ul>
25.	<b>An overview on Event-Driven Architectures</b> <ul style="list-style-type: none"> <li>• Real-world challenges of Microservices with managing transactions and querying data</li> <li>• How to solve the challenges of Microservices with decentralized data • Introduction to event-driven architectures</li> <li>• Event Sourcing and CQRS</li> </ul>
26.	<b>Building Event-Driven Distributed Systems and Microservices with NATS and NATS JetStream</b> <ul style="list-style-type: none"> <li>• Introduction to NATS Ecosystem and NATS related messaging patterns • Introduction to distributed streaming systems</li> <li>• Introduction to NATS JetStream</li> <li>• Building next-generation distributed systems with NATS JetStream • Working with NATS JetStream Key Value store</li> </ul>
27.	<b>Building Modern Distributed Applications in Go with SAAS</b> <ul style="list-style-type: none"> <li>• Microservices Skeleton Setup</li> <li>• Scaffold User, Billing, Payment services</li> <li>• Define communication patterns (REST/gRPC)</li> <li>• SaaS Billing Module Design</li> <li>• Define modules: User, Subscription, Payment, Invoicing</li> <li>• Service boundaries and responsibilities</li> <li>• Case Study: Multi-service User/Auth/Billing architecture</li> </ul>
28.	<b>Building Microservices with Docker   Kubernetes</b>

	<p>Docker Compose &amp; Kubernetes Deployment</p> <p>Docker Basics &amp; Containerization</p> <p>Dockerfile, images, containerize all services</p> <p>Compose YAML for multi-service app, deploy in Minikube/K8s cluster</p> <p>Metrics, structured logging with slog</p> <p>Horizontal scaling, service replicas, load balancing demo</p>
